

I currently hold a Technician Class Amateur Radio License K4DMF. I plan to upgrade to General Class and then eventually to Extra Class. As of now, I would probably have limited interference with my licensed frequencies, but when I upgrade, the proposed BPL would certainly interfere with the spectrum of airwaves available to me as a licensed amateur. The ARRL and others have demonstrated repeatedly that the proposed BPL would interfere with our frequencies, and would likely interfere with government and military frequencies as well. If our receiving radio frequencies can be affected, then I assume that when we as amateurs transmit, then we would also interfere with the BPL signal, and if close or strong enough, would probably disrupt the BPL signal. The FCC's job is to protect the public interest in Communication matters. You could no longer consider yourselves guardians of the public interest if you permit BPL. This is in direct violation of the rules concerning one radio service interfering with the primary licensed service. I strongly urge you not to permit BPL. Thank you for your time.
